

Becton Dickinson Syringes (BD Syringes)

Product Info:

The BD Integra™ syringe provides clinicians with the latest advances in retracting technology. The BD Integra syringe offers the following advantages:

- **Detachable Needle¹** Allows clinicians the ability to change needles for filling and administration.
- **Low Waste Space:** The BD Integra™ syringe has .026ml of waste space; less than a BD conventional syringe and less than other competitive retracting syringes currently on the market. Low waste space means less medication waste and cost to a healthcare facility, as well as, minimal splatter after activation.
- **Activation Before or After Needle is Withdrawn From Patient:** The BD Integra syringe is the only retracting device that provides Clinicians with this choice. Whether the device has been activated before or after the needle is withdrawn from the patient, the complete medication dose is always delivered.
- **The BD Integra Syringe Uses the "World's Sharpest Needle Technology"²:** For years, BD has manufactured the BD PrecisionGlide needle, which promotes patient comfort.
- **Latex Free**
