FOR-BID™

Alpar

THE ANTICOPROPHAGIC™ CONDIMENT FOR DOG RATIONS

One-half to one packet mixed with the daily ration imparts a forbidding taste to excrement.

See below for further information on use.

Contains wheat gluten and monosodium glutamate.

HOW “FOR-BID” WORKS

Administer “**For-Bid**”™ by sprinkling on the animal’s food as recommended. If using dry food, it is recommended to moisten food with water before adding “**For-Bid**”™. This food then goes through the gastrointestinal tract, and the breakdown product of “**For-Bid**”™ ends up in the feces. The animal is then sensitized to their feces. When the animal next attempts to eat this feces, the villa of the tongue react, and the animal discards it.

You should see a response after the first or second day.

*Be sure the animals are not on steroids, as this will counter the effect of “**For-Bid**”™.

TYPES OF COPROPHAGIA

1. **ACUTE** - This develops in young animals, and has occurred for 1-3 weeks. “**For-Bid**”™ is 99.99% effective.

2. **INTERMEDIATE** - Animals 3-5 years old that have had coprophagia for 1-3 months. “**For-Bid**”™ is approximately 95% effective.

3. **CHRONIC** - Animals 5-6 years old, that have been eating feces for 1-3 years. This is not coprophagia, but a bad habit. Here “**For-Bid**”™ may not work. If it doesn’t, we recommend obedience training, or the possible use of a muzzle.

POINTS TO CONSIDER REGARDING ADMINISTRATION OF FOR-BID™

- Be sure you are not over feeding your animal, because undigested food in the feces will propagate coprophagia. You are the best judge of this.

- It may be advisable to change the animal’s diet. Try a new diet with a range of B complex vitamins, as well as and minerals.

TO: VETERINARIANS

RE: COPROPHAGIA IN ANIMALS

“**For-Bid**”™ is a highly purified crystalline edible protein fraction, which when mixed with food and fed to an animal may curb coprophagy. “**For-Bid**”™ is not an enzyme mixture which alters the normal endogenous digestive process. Sprinkling the powder on food, which is then consumed by the animal, will yield a forbidden and unpalatable taste to feces. “**For-Bid**”™ has been used by thousands of veterinarians for cats, dogs and horses, without adverse reactions and with exceptional success. “**For-Bid**”™ is available in a single dose packet (8 grams), and is sold to veterinarians in lots of 12.

RECOMMENDED USAGE:

Dogs: 3-20 lbs - 1/4 packet twice a day for 5 days.

20-100 lbs - 1/2 packet twice a day for 5-6 days.

Cats: 1/4 packet per day for 4-5 days

Sprinkle **FOR-BID** on the food You should see a response after the first or second day.

If coprophagy starts again after initial dosage; give 1 gram per day (from this 8 gram packet) for 2-3 weeks as necessary.

When a dog is eating another dog’s stool, or those from a cat’s litter box, we recommend treating both animals.
