

## Dietary Considerations

Purina Veterinary Diets® OM Overweight Management® and OM Select Blend Overweight Management™ canine formulas provide complete and balanced nutrition for safe and effective weight loss and weight maintenance and have been formulated to achieve the following characteristics:

- Low fat
- Low calorie
- Optimal level of natural fiber helps dogs feel full
- High protein to help maintain lean body mass
- Lite Snackers® are a perfect complement when using the OM Formula.

With our new additions to our OM lineup we're offering the options in texture and variety that pet owners, and pets, want.

## Proven Results

In a groundbreaking 14-year study by Purina, dogs fed to a lean body condition throughout their lives had a median life span nearly two years longer than overweight dogs and a later onset of chronic conditions such as osteoarthritis.

It's never too late to begin the lean-fed diet regimen. A recent study showed osteoarthritic dogs that lost weight through diet and exercise achieved increased mobility.

Ask your veterinarian to help you score your dog's body condition. After determining your dog's score, you and your veterinarian can map a route to his ideal body condition and a longer, healthier life.
