

Thomas Labs STOP

Coprophagia Deterrent Pet Meds

Anti-Coprophagic (Stool Eating Preventative)

STOP comes in a very palatable, chewable tablet. Because of the digestive-enzyme properties, STOP has a wide range of activity. The L-Glutamate amino acid in the formula makes the stool taste bad whenever any dog consumes the stool. This will help deter the problem of stool eating (coprophagia). STOP can also be given to any dog when the dog eating the stool is unknown. STOP is also a digestive aid for animals with body odors or having excessive gas needs.

Directions:

Give two tablets the first day and one to two tablets daily thereafter before or after meals, depending on results. Double dosage for large dogs over 50 pounds. Tablets can be crushed and mixed with food.

Active ingredients: C-Kelp, Yucca Schidigera, L-Glutamate, Parsley, Peppermint, Chlorophyll, Garlic, Acidophilus (in tablets only).
